Word count. Approximately 6,780 words in the body, excluding the abstract, references, and declarations.

Declarations

Disclosure statement. The authors report no conflict of interest.

Funding. This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors.

Data availability statement. The code, every results file, and the macro provenance record are available at <https://github.com/MohitPratapSinghRathore/content-rot>. The diagnostic is `code/closure_check.py` and the closed model is `code/compositional.py`.

AI usage declaration. During the preparation of this manuscript the authors used a generative AI tool to assist with language editing and refinement of the text. The authors reviewed and edited all output and take full responsibility for the content of the paper. Generative AI was not used to generate or analyse the study's data, which were produced entirely by the evaluation pipeline described in the paper.

Contributor biographies

Mohit Pratap Singh Rathore is a researcher at Oviqo Private Limited, where his work concerns the measurement of internal state in sequence models and the evaluation of long-horizon failure.

Gunveer Sinh Kalsi is a researcher at Oviqo Private Limited, working on model evaluation infrastructure and the reproducibility of measured claims.

Sriharsha Meduri is a researcher at Oviqo Private Limited. His research interests include the design and evaluation of decision-support artifacts and the governance of machine learning systems in organisational settings.

Pratap Chandra Mandal is with the Indian Institute of Management Shillong. His research interests include strategic management, services marketing, and the managerial implications of emerging technologies.
